Private Offer & License Distribution Guide

Claude Enterprise in AWS Marketplace · Claude Platform on AWS · Claude on Amazon Bedrock

HOW IT WORKS

For all three products, the path is the same: agree terms with Anthropic, sign an Order Form, complete the Customer ID Certification form to confirm the Payer Account ID(s) the offers are issued to, accept the AWS Marketplace Private Offers (MPPOs) in those accounts, and your usage bills through your AWS invoice at the negotiated rate.

What differs is what happens next. Enterprise and Platform apply your pricing automatically. Bedrock needs one extra step from your AWS Admin: distributing the discount to every account that calls Bedrock. Choose Distribute in AWS Marketplace as you accept each offer, or distribute later through AWS License Manager.

KEY TERMS

MPPO — Marketplace Private Offer. Your negotiated pricing, published privately to a named AWS account.

Payer Account — the management account of an AWS Organization that receives the invoice.

Customer ID Certification form — how you tell Anthropic which Payer Account IDs the offers are issued to.

Grant — in AWS License Manager, what passes a Bedrock discount from the payer account to a member account.

Frequently asked questions →

Claude Enterprise in AWS Marketplace

Accept the MPPO, set up your Claude Organization, then add users in the Claude Admin Console. Billed through the AWS account that accepted the MPPO. All user access is managed in the Claude Admin Console, and no License Manager setup is required.

WHO IS TYPICALLY INVOLVED

YOUR TEAM · AWS

Procurement

Certifies the Payer Account ID(s) and accepts the offer. Needs AWS Marketplace buyer permissions, so request them from your AWS Admin first.

YOUR TEAM · AWS

AWS Admin

Grants the Marketplace buyer permissions. Nothing further: no License Manager setup for this product.

YOUR TEAM · ANTHROPIC

Claude Admin

Sets up the Claude Organization, then manages users, SSO, SCIM, and spend controls.

STEPS

From Order Form to accepted offer

1. Agree on terms with Anthropic and sign the Order Form.
2. Complete the Customer ID Certification form to confirm Payer Account ID(s).
3. Anthropic creates the MPPO, only accessible by the Account ID(s) provided in the Customer ID Certification form.
4. Access the MPPO in the AWS Marketplace Console. Review and accept it, then select Set up your account.

WHO OWNS THE NEW ORGANIZATION

The person who completes registration holds the Primary Owner role. There is one Primary Owner per organization and the role uses one of your licenses. Ownership can be transferred, and additional Owners and Admins added, in Organization settings > Members.

AFTER ACCEPTANCE · ONE OF TWO PATHS, NOT BOTH

PATH A · NO CLAUDE ORGANIZATION YET

Anthropic creates a new Claude Organization

Complete registration with the email of the person who should hold Primary Owner. Owners and additional Admins can be added afterwards in Organization settings > Members. Anthropic provisions the organization, then get started with the Administrator Guide.

PATH B · YOU ALREADY HAVE A CLAUDE ORGANIZATION

Register into the organization you already run

For claimed email domains, complete account registration using the email of an existing Claude Admin, or ask an existing Claude Admin to add you as an admin, then complete the registration flow. No second organization is created.

Claude Platform on AWS

Sign up in the AWS Console, accept the MPPO when the Console surfaces it, then set up your Anthropic organization with your work email domain. Billed through the AWS account that accepted the MPPO. Access is federated through AWS IAM on that account rather than the Claude Admin Console, and no License Manager setup is required.

WHO IS TYPICALLY INVOLVED

YOUR TEAM · AWS

Procurement

Certifies the Payer Account ID(s) and accepts the offer. Needs AWS Marketplace buyer permissions, so request them from your AWS Admin first.

YOUR TEAM · AWS

AWS Admin

Grants the buyer permissions, enables outbound web identity federation once per account, and sets IAM for Console and API access.

YOUR TEAM · ANTHROPIC

Organization owner

Receives the setup link at your work email domain and completes organization setup.

STEPS

From Order Form to accepted MPPO

1. Agree on terms with Anthropic and sign the Order Form.
2. Complete the Customer ID Certification form to confirm Payer Account ID(s).
3. Anthropic creates the MPPO, only accessible by the Account ID(s) provided in the Customer ID Certification form.
4. In the AWS Console, open the Claude Platform on AWS service page and choose Sign up . If an MPPO exists, the Console looks it up and prompts you to review and accept it in AWS Marketplace.
5. Select Set up your account and complete your Anthropic organization setup, using your work email domain. Get started with the Setup Guide.
6. If new IDs need to be added during the contract period, use Anthropic's certification form linked in your Order Form to submit new IDs.

IF YOU ALREADY HAVE BEDROCK MPPOS

Contact your Anthropic representative before signing up, so your discount applies from your first request. Discounts cannot be applied retroactively.

ONE SUBSCRIPTION PER AWS ACCOUNT

- Tied to the AWS account that signed up; IAM on that account governs access.
- Users in other accounts reach it by assuming a role in that account.
- A second AWS Organization signs up separately and takes its own MPPO, so certify every Payer Account ID.

KEY RESOURCES

ACCOUNT SETUP IN THE ANTHROPIC DOCS
Claude Platform on AWS setup →

IAM AND ACCESS CONFIGURATION
AWS user guide: setup →

AFTER ACCEPTANCE · ONE OF TWO PATHS, NOT BOTH

PATH A · NO ANTHROPIC ORGANIZATION YET

Set up the organization sign-up creates

Enter the email of your organization's owner at your work email domain, follow the setup link, and complete the organization details. Then create your first workspace and note its ID.

PATH B · YOU ALREADY HAVE AN ANTHROPIC ORGANIZATION

Plan the move as a cutover

Sign-up still creates a new organization: existing ones cannot be converted, and API keys, workspaces, and Console settings do not carry over. Recreate them in the new organization and shift traffic gradually. Both can serve traffic in parallel.

Claude on Amazon Bedrock

Accept one MPPO per model and version, then get the discount to every account that calls Bedrock. Accounts without an activated grant are billed at the public list rate.

WHO IS TYPICALLY INVOLVED

YOUR TEAM · AWS

Procurement

Certifies the Payer Account ID(s) and accepts each offer. Needs AWS Marketplace buyer permissions, so request them from your AWS Admin first.

YOUR TEAM · AWS

AWS Admin

Grants the buyer permissions and distributes the discount, from AWS Marketplace or License Manager, once per AWS Organization.

YOUR TEAM · AWS

Builder teams

Call Bedrock from member accounts. Usage without an activated grant bills at list rate.

STEP 1

Agree on terms & accept offers

1. Agree on terms with Anthropic and sign the Order Form.
2. Complete the Customer ID Certification form to confirm Payer Account ID(s).
3. Anthropic creates the MPPOs per Claude model and model version, only accessible by the Account ID(s) provided in the Customer ID Certification form.
4. Access the MPPOs in the AWS Marketplace Console . Review and accept each of the MPPOs. To distribute as you accept, sign in to the management or delegated administrator account first.
5. If new IDs need to be added during the contract period, use Anthropic's certification form linked in your Order Form to submit new IDs.

IMPORTANT · WHICH ACCOUNTS A DISCOUNT CAN REACH

- Discounts cascade only within the Payer Account of the AWS Organization that accepted the MPPO.
- Multiple Payer Accounts? Certify each one in the Customer ID Certification form.
- New IDs mid-contract go through the certification form linked in your Order Form.

MODEL ACCESS AND FIRST REQUESTS
Getting started with Amazon Bedrock →

DISTRIBUTING DISCOUNTS ACROSS ACCOUNTS
Managed entitlements →

STEP-BY-STEP WITH SCREENSHOTS
Multi-account walkthrough →

STEP 2 · HOW THE DISCOUNT REACHES YOUR ACCOUNTS · ONE OF TWO PATHS

PATH A · MANAGED ENTITLEMENTS RECOMMENDED

Distribute across your AWS Organization

Choose Distribute in AWS Marketplace as you accept each offer, or distribute later through AWS License Manager. Typically requires an AWS Admin, given the permissions needed.

HOW TO DISTRIBUTE · PAGE 5 →

PATH B · NO MANAGED ENTITLEMENTS

An offer per account instead

No License Manager work, but it requires accepting each MPPO in each linked account. Anthropic issues MPPOs to individual accounts, and each account accepts its own, so certify every Account ID in the Customer ID Certification form. Discuss the trade-off with your Anthropic representative.

STEP 2 · PATH A · MANAGED ENTITLEMENTS

Distribute as you accept, or later in License Manager

The recommended way to distribute discounts within an AWS Organization. Typically requires an AWS Admin, given the permissions needed to complete these steps.

OPTION 1 · AT ACCEPTANCE · AWS MARKETPLACE

Distribute from AWS Marketplace

Distribute each offer, per model and version, to every account in your organization as you accept it. No License Manager setup, grants, or activation needed first.

1

Open the offer

Check the prerequisites , then open the offer under Private offers in the AWS Marketplace console

2

Subscribe

Review the subscription agreement and pricing details, then choose Subscribe

3

Choose Distribute

RECOMMENDED

On the purchase confirmation page, review the distribution details, then choose Distribute. See distributing from AWS Marketplace

4

Let it finish

Distribution runs in the background, with grants Active in every account. See tracking distributed grants

IMPORTANT Distribute is offered only on the purchase confirmation page, right after you accept, and always reaches your entire organization. If you skip it, member accounts are billed at public rates until you distribute through License Manager. Choosing it also sets up License Manager across your organization; see what AWS sets up.

OPTION 2 · AFTER ACCEPTANCE · AWS LICENSE MANAGER

Distribute through AWS License Manager

For an offer you have already accepted, or to grant to specific Organizational Units or individual accounts.

1

Set up License Manager

Enable the service-linked role and turn on managed entitlements. See setting up managed entitlements

2

Distribute the licenses

Grant to the Organization ID, an Organizational Unit, or individual accounts. See distributing licenses

3

Accept and activate

Each account accepts and activates its grant, or the management account bulk-activates Organization and OU grants. See accepting and activating grants

4

Repeat for each MPPO

Run steps 2 and 3 per model and version. Errors? See troubleshooting steps

TIMING

2–3 min

INDIVIDUAL ACCOUNT GRANTS

Licenses typically appear within 2–3 minutes

15–30 min

ORGANIZATION-WIDE GRANTS

For thousands of accounts, 15–30 minutes or longer

~1 hour

AWS MARKETPLACE DISTRIBUTION

Most complete within an hour; larger organizations can take longer

- Discounts apply only to usage after activation. Check grant status in the License Manager console; see the managed entitlements FAQ.

STEP 3

How to verify discounts are active

Two checks confirm the offer is in place. The third is optional and proves the negotiated rate is reaching actual usage.

CHECK 1

AWS Marketplace Console

Confirm the subscription is active and tied to the correct MPPO with the negotiated rate, in the accepted and expired offers.

CHECK 2

License Manager

Confirm grants are in **Active** state for target accounts, in granted licenses . If a grant shows **Disabled** , the discount is not applied and the grant needs to be activated. Grants distributed from AWS Marketplace are created Active, and can be deactivated or deleted here.

CHECK 3 · OPTIONAL

AWS Cost and Usage Report (CUR)

CUR aggregates billed dollars per usage type per day and does not display your negotiated rate directly. Derive the effective rate and compare it against your Order Form.

1. Open the AWS Cost and Usage Report or Cost Explorer at the daily/resource level.
2. Filter to **Service = Amazon Bedrock** and the relevant **UsageType** (for example input tokens, output tokens) for each model version.
3. Calculate the effective per-unit rate: **Unblended Cost ÷ Usage Amount** . Ensure the unit matches your Order Form, for example per 1M input tokens.
4. Compare the derived rate against the corresponding line item in your Order Form.
5. Repeat for each discounted usage type and model version covered by your MPPOs.
6. If the derived rate exceeds your Order Form rate, confirm the grant is **Active** in License Manager and was activated before the usage occurred.

IF A CHECK FAILS

What to check first

Troubleshooting steps → Managed entitlements FAQ →

IF YOU SEE	CHECK
No license in License Manager after subscribing	Licenses can take 1–2 minutes to appear. View License Manager in us-east-1. If it's still missing after 5 minutes, confirm the subscription is active in the AWS Marketplace console.
A member account can't see its grant	Check License Manager in us-east-1, confirm the 12-digit account ID on the grant, and allow 2–3 minutes. Without all features enabled, the account needs service-linked roles.
A grant won't activate	The grant must be Disabled or Pending Acceptance. Deactivate or delete any active license for the same model first, and confirm the **license-manager:CreateGrantVersion** permission.
Usage billed at the public rate	A Disabled or deleted grant doesn't block model access, but usage bills at public rates. Reactivate the grant, or create a new one if it was deleted.

Frequently asked questions

Does Claude Enterprise in AWS Marketplace or Claude Platform on AWS require License Manager setup?

No. Both are Anthropic-hosted products, so no grant distribution is required. Your negotiated pricing is applied automatically upon MPPO acceptance.

Who helps if we get stuck?

Your AWS team provides support on request for MPPO acceptance and license distribution. For commercial terms, a reissued offer, or a new certification form, contact your Anthropic representative.

CLAUDE ON AMAZON BEDROCK

What about multiple AWS Organizations?

Each organization needs its own MPPO acceptance and grant distribution. Include every payer account in the Customer ID Certification form so all are covered with MPPOs (one MPPO per payer per model and version).

Can a Delegated Administrator accept offers and manage grants?

Yes. One delegated admin per organization can accept offers and manage grants on behalf of the management account. To distribute from AWS Marketplace, register the delegated admin before you accept the offer.

What happens if a member account already subscribes to the same model?

When the payer account distributes a grant for a model that a member account already subscribes to, the entitlement on the first subscription is disabled. The account then operates under the new distributed grant and its pricing terms.

What if the MPPO was accepted from a linked account instead of the Management Account?

Discounts are tied to the accepting account. Contact your Anthropic representative to reissue the MPPO to the correct Management Account ID, or use License Manager to distribute from the accepting account.

What if a new account joins our Organization after grants were distributed?

If grants were distributed to the Organization ID or an Organizational Unit, new accounts automatically receive the license and accounts that leave lose it. If grants were distributed to individual account IDs, create a new grant for each new account.

Can discounts be applied retroactively?

No. Discounts apply only to usage incurred after the grant is activated. Usage before activation is billed at the public rate.

Which region handles AWS License Manager operations?

Licenses, grants, and activations all operate through the us-east-1 endpoint, regardless of where your Bedrock workloads run.

Do we need to provide Anthropic with individual linked account IDs?

No. Only your Payer Account ID(s), or Management Account ID(s), submitted through the Customer ID Certification form. Distributing discounts to linked accounts is handled by your team, in AWS Marketplace or License Manager.

What happens when Anthropic releases a new model version?

You will need to accept a new MPPO and distribute it again, by choosing Distribute as you accept or through License Manager. Each model version is a separate Marketplace listing and does not auto-propagate from existing offers.

Which account is billed for usage under granted licenses?

The management account that holds the subscription is billed for all model usage across granted accounts. Use AWS Cost Allocation Tags to track usage by member account or team, and filter by UsageAccountId in the CUR to attribute consumption.

What happens if we don't activate the grant?

The account is billed at the public list rate for any Bedrock model usage. Grants must be activated before negotiated pricing takes effect. Grants distributed from AWS Marketplace are created Active.

How do we add AWS accounts after the contract is signed?

Use Anthropic's certification form linked in your Order Form to submit the new IDs. Offers are only visible to the Account IDs certified through that form.
